Art Unit: 2176

DETAILED ACTION

- 1. This action is responsive to communications: original application filed 05/26/2000.
- 2. Claims 1-16 are currently pending in this application. Claims 1 and 10 are independent claims.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 1-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The following limitations recite:

- "the organization of ideas" (claims 1 & 10, line 1)
- " the user" (claims 1 & 10, line 4)
- "the hierarchy instructions" (claims 1 & 10, line 6)
- "the accepted ideas" (claims 1 & 10, line 6)
- "the user numeric priorities" (claim 1, line 9)
- "the priorities" (claim 1, line 11 & claim 15, line 5)
- "the dependencies of ideas" (claim 2, line 2)
- "the tree structure" (claim 3, line 2)

Art Unit: 2176

- "the nodes of a level" (claims 3 & 16, line 5)
- "the list" (claim 4, line 4)
- -"the number priority value" (claim 7, line 4; claim 8, line 2; claim 9, line 4)
- "the predefined categories" (claim 11, line 1)
- "the identified ideas" and "the given position" (claim 13, line 2)

They lack proper antecedent basis.

The dependent claims are also rejected for fully incorporating the dependencies of their parent claim.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Hugh** (U.S. 6,256,032 – filed 01/2000) in view of **Marpe et al.** (U.S. 6,671,693 – filed 11/1999).

As to independent claim 1, Hugh teaches the invention substantially as claimed including a program for the organization of ideas using an electronic computer (organizing and processing pieces of interrelated information 'or thoughts' using a digital computer; Abstract), the electronic computer having a user input device and a graphics display (graphical user interface to facilitate user interaction; Abstract), the program comprising instructions executed on the electronic computer to:

Art Unit: 2176

- accept text identified ideas from the user via the user-input device (the 'key words' of a thought ...inputted by the user; col.6, lines 15-24);

- display representations of the ideas on the graphic display as organized into levels defined by common dependency (a graphical presentation of a portion of the matrix is displayed ... according to the thoughts ... hierarchical-based approaches; col.2, line 45-col.3, line 16);
- accept from the user numeric priorities for the ideas of at least one level (a priority number set by the user indicates the relative importance of a particular thought; col.7, lines 11-17); and
- arrange the ideas of the at least one level on the graphic display (the placement of the thoughts reflects second-level relations ... graphical presentation; col.7, line 64-col.8, line 11 & arrange portion of their information in a traditional hierarchical manner; col.28, lines 35-52) according to the priorities (priority 230; col.7, lines 11-17).

Hugh, however, does not explicitly teach "accept at least one-idea hierarchy instructions from the user via the user-input device, the hierarchy instructions relating the accepted ideas in dependencies."

Marpe teaches accept at least one-idea hierarchy instructions from the user via the user-input device, the hierarchy instructions relating the accepted ideas in dependencies (Exploring or pre-writing is the process of brainstorming and taking unstructured notes ... relation among ideas, groups related ideas and constructs small hierarchical structures ... Organizing is the process of putting those notes or ideas in order, in the form of an outline or a hierarchy; col.12, lines 11-61& receiving data from multiple users in a plurality of categories, wherein the data is organized in a hierarchy of categories; col.54, lines 56-64).

Art Unit: 2176

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to combine the teachings of Hugh and Marpe because Map's teaching would have provided the capability for translating the abstraction of content and the relations of a hierarchical structure into a sequence of words, sentences, paragraphs, sections, chapters, and illustrations.

As to dependent claim 2, Hugh teaches the displayed representation of the ideas are text displayed in a text outline according to the dependencies of ideas associated with the text, the text outline including paragraphs arranged beneath other paragraphs on which they depend; and wherein the paragraphs of a level are ordered according to the priorities of the ideas to which they are related (col.30, lines 13-38 & Fig.16).

As to dependent claim 3, Hugh teaches the displayed representations of the ideas are node symbols arranged in a tree according to their dependencies, the tree structure including branches visually connecting node symbols to other node symbols on which they depend; and wherein the nodes of a level are ordered according to the priorities of the ideas to which they are related (col.5, lines 10-13 & col.7, lines 11-51).

As to dependent claim 4, Hugh teaches provide a list of representations of identified ideas of a level (col.29, lines 8-24) and wherein priorities are assigned by the user by changing the order of the representations of identified ideas within the list (col.7, lines 10-17).

As to dependent claim 5, Hugh teaches allow changing of order of representations of identified ideas by selection of a given representation of an identified idea as displayed on the graphics display using the user input device and moving the representations of the identified idea

Art Unit: 2176

within the list as displayed on the graphic display device using the user input device (col.6, lines 45-65 & col.14, lines 10-23).

As to dependent claim 6, Hugh teaches when the representation of an identified idea is moved within the list to modify the priority of at least one idea identifier so that the priorities of all identified ideas in the list remain monotonically decreasing (col.23, line 43- col.24, line 24).

As to dependent claim 7, Hugh teaches provide a list of representations of identified ideas of a common hierarchical level and to display a slide control for each identified idea in the list that may be manipulated by the user input device to enter the number priority value (col.24, line 1-24).

As to dependent claim 8, Hugh teaches decrease the number priority value of all specific identified ideas in the list to beneath a given identified idea to a value less than the value of the given identified idea (col.7, lines 11-17 & lines 40-51).

As to dependent claim 9, Hugh teaches increase the value of the number priority value of all specific identified ideas in the list above a given identification idea to a value at least equal to the value of the numeric priority of the specific identified idea (col.8, lines 55-col.9, line 11).

As to independent claim 10, the rejection of independent claim 1 above is incorporated herein in full. However, claim 10 further recites "after acceptance of a given text identified idea from the user in at least one predefined level, prompt the user as to additional text identified ideas for inclusion in a next level having ideas dependent on the idea of the given text identified idea."

Art Unit: 2176

Hugh teaches after acceptance of a given text identified idea from the user in at least one predefined level, prompt the user as to additional text identified ideas for inclusion in a next level having ideas dependent on the idea of the given text identified idea (col.8, line 55- col.9, line 49).

As to dependent claim 11, Hugh teaches the predefined categories are issue, position and argument and wherein the user is prompted with possible arguments when the given text identified idea is a position and the user is prompted with possible positions when the given text identified idea is an issue (col.24, line 45-col.25, line 11).

As to dependent claim 12, Hugh teaches the user is prompted with a set of open-ended questions (col.21, lines 36-54).

As to dependent claim 13, Hugh teaches the open-ended questions are augmented by text from the identified ideas of the given position (col.21, lines 36-54).

As to dependent claim 14, Hugh teaches allow the user to select from a set of predefined generic identified ideas and hierarchies and to provide an editor for editing the predefined generic identified ideas and hierarchies (col.7, lines 28-51 & col.22, lines 13-38).

As to dependent claims 15-16, they include the same limitations as in claims 2-3, and are similarly rejected under the same rationale.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
